

# Selective Plating Services

**SIFCO Process®**  
*On-site  
At your facility  
At any of our shops, worldwide*

Selective plating has been our only business for fifty years. Our experienced Technicians will provide you with a level of service and expertise that is unparalleled within the industry. SIFCO Applied Surface Concepts can provide you with the combination of field experience, expertise in chemistry, engineering, metallurgy, and electroplating to help you with your most difficult metal finishing applications.

The SIFCO Process is approved through numerous industrial and military specifications. It is a portable alternative when a stationary part is too difficult to move. The SIFCO Process provides pinpoint, localized plating and anodizing without excessive masking and it produces deposits and coatings with excellent adhesion.

SIFCO is the industry leader in Selective Plating technology. With our fully staffed Research and Development, Engineering, and Technical departments, we can provide you with expertise ranging from basic technical support to full application development.

Whether you have only an occasional need for selective plating or whether your operation involves higher volumes of parts, we can provide flexible alternatives and practical solutions for your metal finishing needs.

### By The Job

We can plate your parts on-site anywhere in the world, or at any of our seven service worldwide locations.

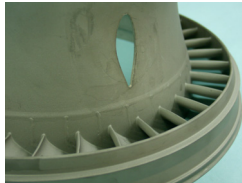

### For ongoing applications

If your plating needs are based on a consistent number of parts over a specific time period, we can plate your parts either at your facility or at ours. Pricing is based on requirements for the specific application, volume, and location.

Contact us at any of our convenient locations to discuss your application!
